

Installing a Signature Tablet

Connecting the Tablet

Installing the Signature Tablet is a quick and easy operation using the Securit World browser CD. First, however, you need to connect up the tablet to the PC.

There is only one connection from the Tablet to the PC – this being the RS232 cable from the back of the Tablet to the COM port. This is a specialised cable, however, as one end has a connection for a power supply. The power supply is to be 12 volt DC. Once this is connected, the screen on the tablet will light up and the tablet will initialise before returning to its original state. The green light should be flashing, however, to indicate that power the unit is active.

Installing the Software

To install the drivers for the Signature Tablet, simply enter the 'Drivers' section on the Securit browser CD and click the 'Install' button. This will install the drivers and capture software for the Signature Tablet.

Securit software

Simply ensure that you have the image that will be the signature field set as 4*1 ratio on the badge design and is set to black and white in the Database Layout Creator.

Then, in the Securit itself, make sure the image field is set to be captured from a Signature Tablet. In the case of the Securit 5500-32, this is an option in the sources dialogue box. In the 5000-32, this is viewed and can be selected as a Direct Source.
